

A Sampling unit and technical-replicate handling

B Soft-threshold assessment for the signed bicor network

Verified CD34+ HSPC network inputs and parameters

48 sequencing-library profiles; six technical-replicate sets aggregated at the raw-count level; 42 participant-by-timepoint profiles from 23 participants.

Signed bicor WGCNA; fixed soft-threshold power = 18; scale-free topology fit R^2 = 0.8016; mean connectivity = 19.3545.

Minimum module size = 30; merge cut height = 0.25; 27 modules including grey; participant blocking retained in the predefined contrasts.
